Professional Summary

Passionate **Cloud Computing** student with strong interest in **Full Stack Development**, **Cloud Infrastructure**, and **Backend Engineering**. Skilled in **Java**, **React.js**, **Docker**, **Linux**, and **AWS services** with hands-on experience in building and deploying scalable web applications. Strong understanding of **Data Structures and Algorithms (DSA)**, modern development workflows, containerized environments, and cloud-based deployment practices. Eager to contribute to real-world software and cloud engineering projects while continuously learning modern technologies.

Technical Skills

- **Cloud DevOps:** AWS EC2, Docker, Kubernetes, Linux Server Management, Cloud Deployment
- **Core Skills:** Data Structures Algorithms (DSA), OOPs, Problem Solving
- **Programming Languages:** Java, JavaScript, C++
- **Frontend Development:** React.js, HTML, CSS, Tailwind CSS
- **Backend Development:** Node.js, Express.js, Spring Boot, REST APIs
- **Full Stack Development:** MERN Stack, Client-Server Architecture
- **Database:** MySQL, MongoDB
- **Tools Technologies:** Git, GitHub, VS Code, Postman

Coding Technical Achievements

- Solved **200+ LeetCode problems** using **Java**, covering Arrays, Strings, Dynamic Programming, Hash Tables, DFS, and Backtracking.
- **LeetCode Profile:** leetcode.com/u/jayeshpatelswami1
- Built and deployed multiple **frontend and full-stack applications** using React.js, Node.js, MongoDB, and REST APIs.
- Worked with **Docker containers** for application deployment and environment management.
- Practiced **AWS EC2 setup**, **Linux server management**, and application hosting on Linux environments.

Education

Bachelor of Technology (B.Tech) in Cloud Computing Parul Institute of Engineering and Technology	2024 – Present
Diploma in Computer Engineering Parul Polytechnic Institute	2021 – 2024

Internship Experience

React Developer Intern Sanimation Studio	3 Months
---	-----------------

- Developed responsive frontend interfaces using React.js.
- Worked on reusable UI components and API integration.
- Collaborated with the development team for improving user experience.
- Gained practical exposure to frontend workflows and project deployment.

Projects

Featured Project: CloudDeploy Local

[View Repository](#)

Technologies Used: Docker, Kubernetes, Git, GitHub Actions, Node.js, React.js, MongoDB

Key Features: Git-based deployment, automated Docker image builds, containerized application deployment, Kubernetes orchestration, deployment lifecycle management, and centralized deployment dashboard.

- Developing a self-hosted **Platform as a Service (PaaS)** inspired by modern deployment platforms, focused on simplifying the deployment and management of containerized applications in a local cloud-native environment.
- Implemented automated **Docker image building** and container execution to package applications into isolated and reproducible environments.
- Integrated **Kubernetes** for container orchestration and application deployment management, with functionality for managing application workloads and deployment status.
- Designed a deployment workflow where users can provide a **Git repository URL**, allowing the platform to clone source code, detect the application, generate required deployment configurations, and initiate the deployment process.
- Built a backend **Deployment Engine** using **Node.js** and **Express.js** to manage different stages of the application deployment lifecycle.
- Structured the platform using modular services for **Docker operations, Kubernetes integration, deployment management, and application lifecycle management**.
- Developed a centralized **React.js dashboard** for creating deployments, tracking deployment progress, viewing application status, and managing deployed applications through a unified full-stack interface.

Project 2: ContainerChat

Technologies Used: Docker, Docker Compose, React.js, Node.js, Express.js, MongoDB

- Built a containerized full-stack messaging application using **React.js, Node.js, Express.js, and MongoDB**.
- Orchestrated frontend, backend, and database services using **Docker Compose**.
- Implemented **CRUD APIs, Docker Volumes, and Container Networking** for persistent storage and service communication.

Project 3: Portfolio Website

[Portfolio Link](#)

Technologies Used: Next.js, React.js, Tailwind CSS

- Designed and developed a responsive personal portfolio website showcasing projects, technical skills, and experience.
- Implemented smooth navigation and interactive UI components using **React.js** and **Tailwind CSS**.
- Utilized **Next.js** features for SEO optimization and improved deployment performance.
